

National Forensics Sciences University, Goa Campus
TA-1 Examination

Program Name – M.Sc. CS /DFIS Sem – I Date- 09/09/25		
Subject Name- Cyber Security Audit and Compliance		
Subject Code- (CTMSCS SI P2, CTMSDFIS SI P2)		
Time- 45 minutes		Max. Marks- 25
I	Short Answer Questions	10 marks
	I. What is the difference between IT audit and IT assessment?	2 mark
	II. An organization wants to evaluate its current security posture. Which process should it initiate, and what key elements should be assessed?	2 mark
	III. A company is preparing for an IT audit. Describe how the presence of a compliance framework like ISO 27001 can assist during the audit.	2 mark
	IV. A firm has failed to implement proper access controls and is now facing legal scrutiny. Identify the type of noncompliance and suggest one corrective action.	2 mark
	V. During an IT compliance audit, the auditor finds missing documentation for data handling procedures. Explain why this is a concern and how it affects compliance status.	2 mark
II	Answer any 3 questions (3 x 5 marks each)	15 Marks
	i. Your organization is planning to evaluate its cybersecurity posture. The management is confused between conducting an IT security assessment versus an IT security audit. Design a decision matrix that helps determine which approach to use based on specific organizational scenarios, including timing, scope, and regulatory requirements.	5 marks
	ii. A healthcare organization needs to implement IT governance compliance covering HIPAA, SOX, and internal policies. Create a compliance mapping framework that identifies overlapping requirements and demonstrates how to fulfil multiple compliance criteria simultaneously.	5 marks
	iii. A financial services company discovers several compliance violations during an internal audit: outdated access controls, missing security patches, and inadequate data encryption. Develop a risk-based remediation plan that prioritizes these issues and demonstrates understanding of noncompliance consequences.	5 marks
	iv. Describe how auditing within IT infrastructure helps maintain long-term compliance. Include key activities and tools used.	5 marks
